SUMMARY

Freelance full stack developer and Computer Science student shipping production web and mobile applications for international clients across North America, Australia, and the Philippines. Backend and cloud focused: Next.js, Django, FastAPI, REST API integration, PostgreSQL, Docker, and CI/CD. Comfortable owning delivery end to end in fast-paced environments.

EXPERIENCE

Full Stack Developer — Tru Creative Agency, Toronto, Canada (Remote) *Jun 2026 — Present*

- Sole developer on a production pricing, quoting, and invoicing web application built in Next.js against a 16-table Airtable order-to-cash schema.
- Designed and shipped a per-supplier pricing engine computing landed cost across nine suppliers (markup, FX buffer, freight, duties, brokerage, container splits) — delivered in roughly two weeks against a two-to-three-month estimate.
- Built five branded server-side PDF document generators (quote, order acknowledgement, customer invoice, supplier purchase order, packing list) using Puppeteer.
- Integrating QuickBooks Online via OAuth 2.0 through a staged bookkeeper queue; authored the product requirements and Airtable data specification for the build.

Backend & AI Automation Developer — EcoInk Digital (Remote) *Dec 2025 — Present*

- Build backend systems and AI-powered automation workflows for service-business clients, integrating tools such as Make.com, QuickBooks, voice AI, and communication APIs.
- Designed end-to-end lead intake, quoting, and notification pipelines, connecting web forms and AI voice agents to automated email and SMS workflows.

Full Stack Developer — Framesports (Remote) *Apr 2026 — May 2026*

- Shipped 50+ pull requests at an 82% close rate on a live production Ruby on Rails and React codebase, working directly with the CTO and CEO.

API Integration Specialist — Locl (Remote) *Nov 2025 — May 2026*

- Built a Django-based microservice integrating multiple third-party REST APIs into the client's platform, replacing a slow manual process with a direct automated connection, with modular endpoints, logging, and error handling.

Software Developer — FishPilot Pro (Remote) *Dec 2025 — Feb 2026*

- Delivered a user-facing module in Next.js that improved UI/UX; built responsive components, integrated APIs, and optimized performance across devices.

Work Immersion Trainee — Department of Information and Communications Technology *80 Hours*

PROJECTS

BalotaChain on the Saksi Framework — Undergraduate Thesis, Lead Researcher *2026 — Present*

- Implemented the Saksi cryptographic framework in Rust (threshold ElGamal on ristretto255, distributed key generation, zero-knowledge proofs) and the BalotaChain election app on Hyperledger Fabric with chaincode in Go.

iAayos — Blue-Collar Services Marketplace, Full-Stack Lead *2025 — Present*

- Marketplace connecting workers, agencies, and clients in the Philippines. React Native (Expo), Next.js, Django, PostgreSQL, Supabase, Docker, GitHub Actions CI/CD, DigitalOcean.
- Implemented real-time WebSocket chat, AI-assisted identity verification using DeepFace and Tesseract OCR, LSTM-based price prediction, and escrow payments via PayMongo.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Rust, Go, PHP, HTML, CSS, C++ (familiar)

Frameworks: Django, FastAPI, Next.js, React, React Native (Expo), Flutter, Puppeteer

Databases: PostgreSQL, MySQL, Supabase, Airtable, MongoDB (familiar)

Infrastructure & Cloud: Docker, docker-compose, GitHub Actions CI/CD, DigitalOcean, Railway, Vercel, self-hosted staging server; pursuing AWS Cloud Practitioner certification

Integrations: REST APIs, QuickBooks Online (OAuth 2.0), Stripe, PayMongo, OpenAI, Anthropic, OpenRouter, Make.com, Supabase Storage

Tools: Git, VS Code, Postman, Turborepo monorepo

EDUCATION

Bachelor of Science in Computer Science — Western Mindanao State University *2024 — 2027 (Expected)*

Associate in Computer Technology, Application Development — Western Mindanao State University (includes five-month internship) *Completed 2025*
